By the military industrial complex. It could be seen in the movie. I'm just a fantasy. What's been there? Fire.

Fire. Freedom. I said this once or twice, but it bears repeating: if you like your current insurance, you will keep your current insurance. Do you think about the army and the navy and the missions they run to protect the world? They run on SAC.

You have done a really spectacular job. I guess pretty much everybody at this table is your customers. So they've slammed so bad. Exactly. I wanna congratulate you. Thank you, mister president. Thanks. And I'm back. Here we go.

Welcome to the Duke Report, a platform that we built to restore reason in an age of manipulation. Here, we investigate systems that shape belief. We study the structure of language, power, and persuasion—what I call epiwar, the war on how we know what we know. Our goal is to deliver tools and understanding that expose these mechanisms and return clarity to the individual mind. From the ashes of the Pacific Palisades fire in January 2025, we built this project with purpose—to create a resource for thinkers, researchers, and truth seekers.

At dukereportbooks.com, you'll find nearly a thousand books, each paired with in-depth summaries, podcasts, and explainers. On SoundCloud, over 200 deep dive episodes expand the conversation. And on YouTube, new short explainers arrive daily—sharp, focused, and built to inform free thinkers across the world. This work is offered freely with no paywalls, no algorithmic gatekeepers. If you value it, subscribe at thedukereport.substack.com or support directly through buymeacoffee.com/thedukereport.

Your contribution keeps the project alive and independent. The battle for freedom begins in the mind. Strengthen your discernment. Question the frame. Live free in truth.

And I'm… we're gonna talk about discernment today. We're gonna talk about a lot of things, but I wanna start by thanking God that I had the ability to do this podcast today, because I woke up this morning with some thoughts in my head. And this is… this is my notes for the show today. Okay? I had… I have… let me see if I could… I have to close them. Here we go. Those are my notes for the show today. And because of the blocking and tackling that I've done, as far as all of the books that I've read and my understanding of how to use large language models, I've been able to put together what I think is a pretty cohesive presentation today. But I can't move forward without thanking the people—the giants whose shoulders I'm standing on top of. So first and foremost, Anthony Sutton and Carol Quigley. But along with those people: John O'Dowd, Jim McGregor, Jerry Doherty, Guido Preparata, Courtney Turner, Patrick Wood. There's… there's a litany of people. I'm… today, I'm gonna be leaning heavily on the work of Simon Dixon and Richard Werner, but there's a ton of people out there—Missus Heritage History, who you met a couple of weeks ago. If it weren't for all of these people, I wouldn't be able to do what I'm gonna do today and say what I'm gonna say. And

if it weren't for the tools available… So I'm using Notebook LM. Some people think that that's creepy, but I'm using a large language model. And I woke up this morning with this. And what you're gonna get today is a result of my ability to stand on the shoulders of all those people and then put all that stuff together in a way that I can explain to you what's going on.

So, let me start by saying that I woke up this morning with this idea, and the idea was that all of the solutions that we're being presented with right now are material, and that's fundamentally part of the problem. And so I have a deck that I'm gonna go through, and I'm gonna kind of explain this stuff in-depth. But I have a video that I made. And again, it's 2:00 Pacific now. I woke up at about 7:30 or 8 AM this morning, and I produced all of this material since then using these tools. So, let me just preface what I'm about to show you.

So, the name of my presentation is "God's Gigawatt"… I'm sorry, "Gold, Gigawatts, and God." And I realized all three of those words start with 'G,' and it's alliterative. And so people are gonna say that I'm talking about some kind of a new six-six-six, and I'm a Freemason or something like that. And I didn't… I didn't mean it. Although I think that maybe this is the anti-six-six-six. So this might be the antithesis to the Gnostic principles that we're all up against at this point.

But, I have this video in two forms. I'd like to try to use the StreamYard built-in function, but people have complained in the past that they don't get any audio. So I'm gonna try that, and I would like somebody in the comments to let us know if you can't hear it, and then I have a fallback.

But in any case, my thesis is that we're in a civil war. And the civil war is not between the Republicans and the Democrats, or labor and the Tories. It's not about political parties because I think that those things are all fake. I think that they're all school plays, and that doesn't mean that people don't die, and that doesn't mean that things don't have real consequences for people in the real world. But that said, I think that the civil war is between the old guard, who I'm calling the Phoenicians (now that I've gotten that straight with Missus Heritage History). I think that we live in a world that is controlled through Phoenician empires. And then the new kids on the block who are the technocrats. And I believe that the technocrats and the Phoenicians are in a civil war right now, and they're each trying to infiltrate one another, because the technocrats started in the 1930s trying to build their movement, and then they were kicked out. Elon Musk's grandfather was kicked out of Canada. He wound up in South America. And then somehow the technocrats have managed to get enough money out of the old guard to spin up Silicon Valley in order to build their control grid, which I'll go into.

But I think that there is a tug of war because the old guard has a standard mechanism. We came off of the gold standard with Nixon, and now our currency is being inflated away. The assets are being stripped out of the Anglo-American empire, and the power centers are relocating. My guess is that they're relocating from London to Qatar and from New York to Singapore. That's my guess. That doesn't mean that they're gonna completely abandon or leave New York or London. They'll still be there, but we can all see what's happening to New York and London right now. Like, that's not a good… that's not a place where these people wanna go live. And the people who are in control, they probably wanna live near the control centers of where their money is. And if you assume that there's gonna be some kind of conflagration between Russia and Europe at this point, which is something that's trying to be spun up, then you don't wanna really be right in the middle of that. You can keep Switzerland where it is, but if you're gonna be moving large pallets of gold around, you probably want some place that's more like Singapore—that's kind

of out of the war zone—or Qatar, which is close to a war zone, but not in the middle of it, and next to the biggest military base in The Middle East, which is The United States military base.

So, in any case, let me start by showing this video. And if you've got questions, I really wanna make this interactive today. So I'd really like it if you'd ask questions. Jessica's monitoring the conversation on all the different platforms. And of course, because certain platforms like Rumble and X (X does, Rumble doesn't really, and Substack don't really integrate on the chat), then she's gonna have to go back and forth. So it would help her out a lot if you put a 'Q' in front. And keep it on topic. Please keep it on topic. Like, I don't wanna know about some other topic other than what I'm talking about today. Okay?

So with that, I'm gonna try to play this video, and I want people to let me know whether or not we've got good audio. And if not, then we'll go with the fallback. So here we go.

VIDEO:

"Gold, Gigawatts, and God. Ask a really big question: what is the true nature of power? I mean, really. Is it about gold? Is it about energy, gigawatts? Or is it something else, something deeper? In this explainer, we're gonna dive into a pretty provocative idea: that a system of global control that's been around for millennia isn't just ending—it's actually at war with itself.

You see, for centuries, the thing we call empire hasn't really been a country like Rome or Britain—not in the way we usually think. The idea here is that it's more like a mobile, parasitic financial system, a web of control that latches onto a host nation, drains it of its wealth and vitality, and then just packs up and moves on to the next one.

Okay, so here's the kicker: what happens when that system, that parasitic empire, turns on itself? The central thesis we're exploring today is that there's a hidden civil war going on right now for the future of global control.

To really understand the war that's supposedly happening now, we've got to rewind and look at the old playbook. So let's start with the historical model of power, what we can call the Empire of Gold. Some analysts have a name for this: the Phoenician method. And the cycle is pretty consistent: a financial oligarchy captures a host nation, they establish a belief in a certain currency, they exploit that nation through debt, strip it of its real assets, and then—this is the crucial part—they migrate their center of power, leaving the old host completely hollowed out. And you can literally trace this lineage as it snakes through history. It's not about the nations themselves, right? It's about where the center of financial gravity is. You can see it move from Phoenicia through places like Rome and Venice, then shifting to Amsterdam, then London, and for the last century or so, New York. Each time, it's like a single continuous entity just changing its clothes.

So how do they do it? Well, the mechanism behind this capture is brutally effective. It's basically a four-step playbook. First, you lend money to governments at interest rates that are mathematically impossible to ever fully repay. Then you inflate their currency, making their money worth less and less. You engineer boom and bust cycles

to create instability. And then, during the inevitable collapse, you sweep in and seize all the real stuff—the land, the resources, the infrastructure. It's a system designed to create a crisis just so you can profit from it.

But here's where it gets really deep. The control isn't just about money. The most important part is something called epistemic capture. The idea is simple: government is downstream of what people believe. So if you can control the media, the education system, and even the very definitions of words, you control the state. You basically get to control reality itself.

So what happens when the host nation starts to fail? As the current Anglo-American system gets hollowed out, a power vacuum starts to form, and a new faction has apparently risen to fill it—one with a radically different vision for control. Welcome to the Empire of Gigawatts. This has supposedly created a massive split—a civil war of standards right inside the oligarchy. The old guard is fracturing, and this new group of technocrats is challenging the old gold-based model of power. And their vision… it is a whole different ballgame. Instead of money based on gold, they're proposing money based on units of energy, on watts. They're pushing hard for central bank digital currencies, a global digital control grid, and—yeah—total surveillance, all packaged up in the name of efficiency.

And if you wanna get a peek into the mindset behind this, look no further than this quote from the World Economic Forum's Klaus Schwab. He called the pandemic "a narrow window of opportunity to reflect, reimagine, and reset our world." Now, the key takeaway from that isn't about recovery—it's about a complete redesign, a reset of the whole system.

Okay, so we've got two sides fighting for control: gold versus gigawatts. But what if it's a false choice? This brings us to the core argument of this whole thing: that we're looking at a kind of Gnostic prison with two competing wardens fighting over who gets the keys. So let's just compare these two wardens for a second. The gold faction—the old guard—controls you through debt and the threat of violence, and they offer you the liberty to trade within their system, of course. The gigawatt faction—the technocrats—they aim to control you through data and total surveillance, and they offer you liberty from inconvenience. As you can see, they're different methods, but the goal is kinda the same: managing the human herd.

And here is their crucial common ground: both of these factions are described as forms of Gnostic reductionism. Basically, they're both trying to build reality entirely out of physical stuff, out of matter, completely denying that there's any spiritual dimension to life. In their worldview, humanity is just another resource to be managed, optimized, and controlled. This brings us to the absolute heart of the manipulation: the word 'liberty.' Both sides twist its meaning to get us to consent to their brand of slavery. The sources we're looking at argue that we've been taught to see liberty as horizontal—you know, a right granted to us by a government or a market. But they propose that real, true liberty is vertical—a spiritual endowment that comes from God and God alone.

So here's the crucial point: if both of these materialist systems are just a trap, then the only real way out must be vertical. It's not about choosing a better warden—it's about leaving the prison altogether. The proposed escape begins with reclaiming Logos. Now in Greek, this is so much more than just 'the word.' It's the underlying reason, the

deep logic and order of the universe. It's the power of language to define reality for yourself instead of having it defined for you by the prison wardens.

Next, we need *krisis*. This is spiritual discernment. Think of it as having a finely tuned BS detector. It's the ability to critically judge the information you're being fed, to see the bars of the prison for what they are, and to cut through all the propaganda from both the gold and the gigawatt factions. Once you have that clarity, you can cultivate *prautes*. This is often translated as 'meekness,' but that's not quite right. It's not weakness. It's more like power under perfect control. It's having the inner strength to watch a corrupt system collapse without getting sucked down into the chaos and violence yourself.

And this inner strength is fueled by *agape*—a kind of divine, unconditional love. Think about it: the entire empire, in both its forms, is built on transactional logic—debt, control, data for service. Agape is the one force that completely breaks that model. It operates on a level where debt and transactions are totally meaningless.

Ultimately, all these principles lead to the state of being *Christos*—the anointed one. In this context, it means an individual so aligned with that divine order, with the Logos, that the material control grid of the empire just becomes irrelevant. It loses its power over them.

So we arrive back at the final question: gold, gigawatts, or God? We can see the conflict isn't really between two financial systems. It's a battle between a purely materialist worldview and a spiritual reality. The source material we're looking at argues that the entire materialist order—whether it's based on gold or gigawatts—is built on a faulty premise. It completely ignores a foundational truth: 'In the beginning was the Logos.' And that leaves us with a final question to really think about: is true freedom something we can ever find in a system built by man, or is it something that can only ever be truly realized in the spirit?"

END VIDEO

Alrighty then. Let me take that out.

So, again, that whole thing started from here. I'm… I'm blown away. There was one thing at the end there that I would have changed, and that is that *Christos* is capitalized. The word means 'anointed,' and I'm not trying to insinuate in any way, shape, or form that… this is, as far as I'm concerned, this is the Christian epistemology. So: Logos, *Krisis*, *Prautes*, Agape. If you can apply all of those things whenever you're running into a decision-making process, then you'll be anointed. Okay? That doesn't mean that you'll be Christ. It means you might be Christ-like. You might be moving in the direction of being like Christ, but Christ is perfect. Okay? And none of us are perfect. We're all fallen. So I don't wanna make… if I had one thing to change in that presentation, it would be that the 'C' in Christos would be capitalized. But other than that, I think it was kind of spot on.

And so, that's where I think that we are right now. I think that we've got the old, kind of gold-based order that needed… the technocrats needed to get the support of the gold-based order in order to be able to launch Silicon

Valley, in order to be able to invent the computer and the Internet and all of those other things that they invented. But now there's a tug of war. There's a battle going on between the two of them about whose system is gonna be in control—which is why you've got so many people buying gold and silver. Gold and silver are going off the charts right now, gold particularly. And then you've got the Bitcoin versus stablecoin controversy, and all of these things are indicative of different political positions within the oligarchy. Okay? So they're not all in agreement. And Simon Dixon points out, and I think that he's right, that Bitcoin is gonna be the store of power—store of wealth—for the oligarchs who are on the technocratic side of the equation. Okay? And gold is going to be the store of wealth for the old school. Okay? And smart people understanding investment probably have a little bit of each. Okay? So they're… they're gonna… it's gonna be a 'heads I win, tails you lose' situation for the oligarchy. Okay? But both of these systems are material. Okay? Both of these systems are godless.

And in the epistemological form, understanding that we're in an existential fight that's based on what we believe… and that, in the essence of Christianity, in the essence of the teachings of Jesus, okay, he gave us this method of Logos, *Krisis*, *Prautes* with Agape. Okay? This is the Christian method, and it's only informed… I could only do this today—from this, when I woke up this morning—because of what Wolfgang Smith refers to as vertical causation. That is, when I went to sleep last night, this was not in my being. Okay? This was not in my Peter Duke's experience. Alright? When I woke up this morning… and I was thinking a lot about the whole concept of 'sleep on it.' 'Sleep on it' is such a powerful thing. You know? It's when God talks to us in our dreams.

So, anyway, I've got some slides. I'm gonna go look at some questions too, but let me pull up the slides. So I've got this kind of broken down. I did… again, I did three different decks and four different videos, and I still haven't even gotten around to making the audio podcast yet, but I will.

And so let's look… let's look at some questions. So, Xanadu said, "Zarlanga." Okay. So, let me see if I can share with you. I think Zarlanga is in my… so, basically, the way that I put this together… I'm pretty sure that Zarlanga… I can share this. Let me pull this screen away so that I can show you what I did. Because I want all of you to do this. Okay? I want all… Notebook LM… I played around with all of the different LLMs out there, and the one that I think is gonna be a game changer for most people is Notebook LM. So I'm gonna share this screen. Here we go. And here we go.

So for people who are not familiar with Notebook LM, it's a product by Google. And you can see that I took a bunch of sources that I had, and some of them loaded and other ones didn't load. And I thought that there was enough redundancy that… and I needed to get this done in order for the show to start today. So you said, "Zarlanga, *The Lost Science of Money*." I believe I put… yep. There it is. *Lost Science of Money* right there. Okay. So *The Lost Science of Money* is formulated in…

So, basically, what I did is that I wrote down my idea, okay, of that… you guys just saw, okay, about the civil war, about materialism versus Gnosticism, okay, and about the definition… the Christian ontology that is required in order to achieve what Wolfgang Smith calls vertical causation. Okay? So I put Wolfgang Smith in here. I put Zarlanga in here. I put Simon Dixon. I put Richard Werner. I put a bunch of books. Okay? I put Webster Tarpley. And then I just… and then I went into another app. I went into Gemini. I didn't use ChatGPT today. And I had Gemini write me prompts that I could use. And if you see over on the right side here, where it says "Audio Overview," this is how I make the deep dives. "Video Overview," this is how I just made the video. So I got Gemini to write a prompt for me, and then I

put the prompt in here. And you can… if I click on it, I think… let me see? If I go to "Gold, Gigawatts," and I click on here… and then I… I won't start it. But here's my prompt. Okay? So there's the prompt that I wrote in Gemini. Okay? And that's how I wound up making that video. And that's how I'm gonna… that's how I wound up making the slides that I'm gonna show you also, because the slides is another thing called the slide deck right here. And then… and then there's infographic. I forgot to show you the infographic. Let's bring it up, shall we? I'm gonna get rid of this. Say remove. And I gotta go find the infographic image file. Hang on a second. Yeah. Let's see if I can find this. Here we go. And this is dope. This is totally dope.

So, so let's answer Xanadu's question. Look, we got more alliteration: Xanadu, Zimba, Zarlanga. He said, "*Lost Science of Money* calls gold the first fiat currency," and then he said, "Do you agree?" Yes. Because I think all currencies are fiat. And I think that the whole idea of… the only reason that gold became a standard is because it was limited, and the bankers convinced everybody that that should be the standard. This is the epistemological component of belief. Like, I've talked about before, my definition of magic is when you take a self-evident truth and you wrap it in a mystery. Okay? So the fact that gold becomes the standard is only a standard because the people have created a mystery around gold, and then everybody agreed to it. And that's what makes it magic. Okay? There's nothing intrinsically valuable about gold, okay, except that everybody agreed that because it's limited, that that will be the standard. It's hard to move around, and because it's hard to move around, it facilitated this thalassocracy debt cycle. But, anyway, yeah, I believe that money is all a form of magic. And that's why I think that really, in order… and I don't know what the exact solution is, but Mike Jones talks about it in his book *Baron Metal* about how if you don't have a morality-based economy, that you're always gonna wind up where we are now—which is, again, why Jesus threw the money changers out of the temple. Okay? This is… that's the whole point.

Anyway, get rid of this. And let's see… Rose Valizia says, "Profound framing." Thank you very much. I appreciate your insight. Xanadu says, again, "Freedom on an ontological level is God-given." 100%. Freedom is internal, and it's about your relationship with God. And from a social basis, it's limited, and those limit boundaries are socially, politically contingent, I think. Yes. Yes. Okay. Liberty is something that's external, that it… it is freedom that is bestowed on you by a government or a person or a king or somebody like that. Okay? And I've got slides about this too. I've got good slides. Made some really good slides. It's got some mistakes in it, and it's got some things in there that I think are over my head, and I don't even understand them. But we'll talk about it when we get there.

So, so, yes, 100%, Xanadu. That's an astute observation. Arthur says, "Would properly outlawing corporate and political sociopathy create more equitable basis for human existence?" Yes. And if you understand that these sociopaths are not accidental—that is, they are… if you look at MK Ultra, MK Ultra is a sociopath manufacturing process. Okay? And if you look at the entire way that CEOs and the leaders of corporations are chosen for their sociopathic tendencies… and things like the three-month quarter will weigh you heavily towards sociopathy. So, outlawing it… I don't know if outlawing it would be as effective as making it moral. Okay? It would be moral for companies to not have sociopathic CEOs. Okay? Tim Cook would be gone. Boom. Larry Fink would be gone. Boom. Larry Ellison would be gone. Boom. Okay? No more sociopaths. And you could change the world that way. Right? That would be a tweak. Right? It wouldn't completely fix it, but, yeah, that's a really good step in the right direction. Good thought, Arthur.

Arthur says, "Was the founding of The United States the work of the Phoenicians? Some offshoot." Yeah. I'm convinced that it's Freemasons. It was… again, if you look at my "60 Degrees of Freemason Cabal Chart, Dialectics," and I'll, if I remember, I'll write that down. Let me see. "Chart and dialectics." Yeah. So, the point of the American Revolution was to get rid of the monarchy as the control mechanism and put it in control of corporations,

which was what happened. And, again, in retrospect, after February, it's kind of easy to see that. Okay? You know, you get rid of the king, you get J.P. Morgan. Okay? It's not more complicated than that. Right?

So the Phoenician method, and again, I made this graphic based on my notes, is that you manufacture debt cycles, then you relocate capital, and then you strip assets, and you do that while you're controlling belief systems. This is where I think Curtis Yarvin has it incorrect. His cathedral of control is universities, government, and media. I think that it is a religion, which is why you have this dialectic warfare going on in religion. It's religion, media… what's the third one? Education. Religion, media, and education. These are the epistemic mechanisms for controlling people's beliefs. So I think that Curtis doesn't have it correctly because Curtis is an… and he's a materialist. Okay. So they look at religion as a, you know, an inconvenient hobby that controls the way that people believe. And that's because they don't have any… they don't have any vertical causation. They don't have any Holy Spirit running through them. They don't have any transcendent… they don't have an understanding that we are made in the image of God. Okay? They want us to be more godlike. Well, we started out that way. Like, we don't need to be better than we are because we already are made in the image of God. Gnostics don't understand that. That's not the way that they frame their reality.

And so, let me see if I can get rid of this so I can see my numbers. So, yeah, so I chose it going from Venice to Amsterdam to London to New York. I kept trying to get it to put Switzerland as a little colony in there, but it wouldn't really do it. And then, you see in the middle on the bottom here, you see the gold-backed old order versus the Silicon Valley technocrats. So that's kind of where we are. And if you don't believe that, like, if you look at what Donald Trump is doing right now, okay, with Venezuela and Greenland and now Cuba… you know, I've seen in the news in the last couple of days… this is the technique of North America. This map is from 1946, but it was in the 1930s that I think that Elon Musk's father got kicked out of Canada.

But here's what I was thinking about this morning: when Trump came in, the technocrats tried to grab control, and Elon Musk went in as the doge. Right? And there is a fallback. The technocrats have a fallback because they have J.D. Vance, because I believe that the technocrats are represented by Peter Thiel and Elon Musk. Okay? And their fallback position, in case Trump falters, is J.D. Vance. And so what I see happening is that Trump went in and the technocrats were behind him, but very quickly—and I think it's becoming apparent at this point—that the gold-backed old school, the Rothschilds, okay, are pulling him in that direction, and the technocrats are pulling him in another direction. So for people to look at, like, Israel or Zionists or all this other thing, you're aiming low. You gotta aim higher. Okay? So, you know, you've got the Rothschilds and the European oligarchs that are basically basing their ideas on this gold-backed currency system. And then but they're… but they've got hedges in crypto. Okay? And then you've got the technocrats. Okay? And this is the battle between the two of them. And look at this map and then look at the news and turn the sound down. Okay? Just don't listen to what people are saying because people are stupid. They're not giving you the right info. Okay.

So let me take this out and move… and I'll put in my slides. Oh, I'm gonna go back… I'm gonna go back to questions too.

Share screen. Window. And where's my slides? There they are. Alright.

So I answered the Phoenician question. Xanadu is for the questions today. "I've been using DeepSeek more and more. What's the advantage of Notebook LM?" I don't… I don't know. I haven't used DeepSeek yet. Notebook LM made all these slides. Notebook LM makes audio podcasts. Notebook LM made the video that you watched today from my notes, going into Gemini to write the prompts. And I probably could have written the prompts in Notebook LM. I probably could have written the whole thing without leaving Notebook LM, but I kind of understand the feel of Gemini. I understand the feel of… I understand the nuances of how to write prompts for Gemini or how to write prompts for GPT. I haven't gotten the nuance down for Notebook LM yet. So I'm not sure if that answers your question or not. You know, there's so many different models that are out here right now, and there's only so many hours in a day. Right? I mean, at this point, we have a wealth of… you know, what do they call that when you have too much stuff and it's all good?

Rose says, "Will we need a constitutional convention?" No. That's irrelevant, because they already own all of the politicians. We have to start with our own consciousness first. We have to start with our own personal relationship with God and mindset. Because if we don't get good with that, there's no plan that we can come up with that's gonna work. Okay? So, the problem with the constitutional convention is that they own all the politicians. So who's gonna show up there? A constitutional… you know, William F. Buckley said once, and I think he was being glib, but I think he was right. He said that our country would be better represented if we randomly picked people out of the phone book. This is back when they had phone books. That would be correct. I don't believe there's anyone that's in public office today who, if they showed up at a constitutional convention, would actually be representing us. And I'm sad to say that. You know? You know, maybe Ron Paul, maybe Edward Griffin. I mean, if we had a constitutional convention and it was Guido Preparata and Simon Dixon and Catherine Austin Fitts and Mark Skidmore, and I'm trying to think of some other people… Patrick Wood, Courtney Turner, Christine Jones, Missus Heritage History… if there was a bunch of normies that showed up to try to fix things, yeah. If it was a bunch of attorneys who went to Harvard and Yale, forget Georgetown, forget about it. Like, it's just gonna be more tyranny. It's just gonna be more tyranny. The legalism has gotta go out, and it's gotta be replaced with moralism.

Xanadu one more time said, "What's the best chance of breaking out of the layer of oligarchy? Diagnosis of the problem doesn't break us out of law. One is born out of all study of history." That's why we just have to look. We have complete and total 100% control over getting good with God. We each one of us, right now, today, you have 100% autonomy to be able to do that. If you can start applying Logos, *Krisis*, *Prautes* with Agape on every kind of decision point that you make in your day… Okay? If we all do that, the world becomes a better place. Okay? And we don't have to do it together. We're in church right now. This is Matthew 18:20 church, okay, where two or more are gathered. That's… we're talking about solutions here. I'm giving you the Christian solution: Logos, *Krisis*, *Prautes*, Agape. Do those four things. You're anointed. Okay? It's not more complicated than that. Okay? A lot of Christianity is self-evident truth wrapped in a mystery. Okay? Get rid of the mystery. Look at the truth. It's there. It shows us how to fix this. Here we go. That's the good news. That's what they call good news. Right?

Question: "It seems that the technocrats were reacting to The USA as it was to replace individual self-rule. There's problems with the constitution. That's why they need to go through this Hegelian dialectic. That's why the Berggruen Institute and their network have to burn down the Palisades. Okay? Because they need to get people, citizens, so frustrated with the lack of the ability of the government to govern, okay, that they're willing to replace it with something else. Okay? That that's the whole point."

So let me see if I understand this question correctly. "It seems that the technocrats were reacting to The USA." It's not just the technocrats. Okay? None of these materialists… okay. Look at the Declaration of Independence. The

Declaration of Independence, it's different than the Constitution. The Declaration of Independence says that we hold these truths to be self-evident, that all men are made in the image of God… is that… no… yes, and that our rights come from the laws of nature and nature's God. Okay? That's what Wolfgang Smith refers to as vertical causation. That's why people, when they put together the Bill of Rights, they said these rights don't come from the government. These are the rights that the government is supposed to protect you from people taking away from you. Okay? Well, Barack Obama didn't like that constitution because he said it was full of negative rights. It's full of things that the government is not supposed to do or supposed to prevent things from happening. Okay? And that we needed to fix that. That's what Obama said.

"Individual self-rule. The reason we have different states is because they all have different constitutions, and the founding fathers thought that they would all have different approaches for defining what the word 'liberty' meant. Okay? Liberty is a squishy word. Liberty is a word that it's completely contingent on who you think you're getting your freedom from. And it's very clear in the Declaration of Independence that it's the laws of nature and nature's God. Okay? In the constitution, the constitution is about what government can and cannot do. Okay? And there's a disconnect. There's always been a disconnect between the Declaration of Independence and the Constitution, which getting back to the Freemason question about was The United States founded by Freemasons. The constitution was put into place, you know, sixteen or eighteen
